

DESCRIPTION

The AL4G08 quadruple 2-input positive-AND gate is designed for 1.65V to 5.5V V_{CC} operation.

The AL4G08 device performs the Boolean function Y=A • B or Y=Ā+B̄ in positive logic. The device is fully specified for partial-power-down applications using I_{off}. The I_{off} circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

It operates over an ambient temperature range of -40°C to +125°C.

The AL4G08 is available in SOP14 and TSSOP14 packages.
