

## DESCRIPTION

The A6345A is a low dropout (LDO) voltage regulator that can deliver up to 300mA of current while consuming only 3 $\mu$ A of quiescent current (typical).

The input operating range is specified from 2.5V to 45V, making it an ideal choice for two to six or more primary cell battery-powered applications, 9V alkaline and one or two-cell Li-Ion-Power applications.

A6345A provides wide input voltage range and ensure the stability of fixed output voltage of 1.8V, 2.5, 3.0, 3.3V and 5.0V.

The A6345A is available in SOT-223 and SOP8 packages.

## FEATURES

- Reduced Ground Current During Dropout
- Faster Startup Time
- 3.0 $\mu$ A Typical Quiescent Current
- Input Operating Voltage Range: 2.5V to 45V
- 300mA Output Current
- Low Dropout Voltage, 335mV Typical@100mA for 3.3Vout.
- $\pm 2\%$  Typical Output Voltage Tolerance,  $\pm 1\%$  can be customized
- 1.8V, 2.5, 3.0, 3.3V, 5.0V Fixed Output Voltage
- Current Limit Protection
- Over Temperature Protection
- Available in SOT-223, and SOP8 packages

## APPLICATION

- Battery-Powered Devices
- Battery-Powered Alarm Circuits
- Smoke Detectors
- CO<sub>2</sub> Detectors
- Smart Battery Packs
- Low Quiescent Current Voltage Reference
- BMS systems
- Motor control system/Industrial control system
- Power Meter/Instrument
- Solar-Powered Instrument
- White Goods
- Vehicle-mounted system
- Automotive Head Unit
- Security Equipment
- Communication Equipment

NOTE3:  $V_{IN} \geq V_{OUT \text{ (NOMINAL)}}$ , whichever is greater.

NOTE4: Maximum output current is affected by the PCB layout, size of metal trace, the thermal conduction path between metal layers, ambient temperature and the other environment factors of system. Attention should be paid to the dropout voltage when  $V_{IN} < V_{OUT} + V_{DROP}$ .

NOTE5: The dropout voltage is defined as  $V_{IN} - V_{OUT}$ , when  $V_{OUT}$  is 100mV below the value of  $V_{OUT}$  for  $V_{IN} = V_{OUT \text{ (NOMINAL)}} + 2V$ .

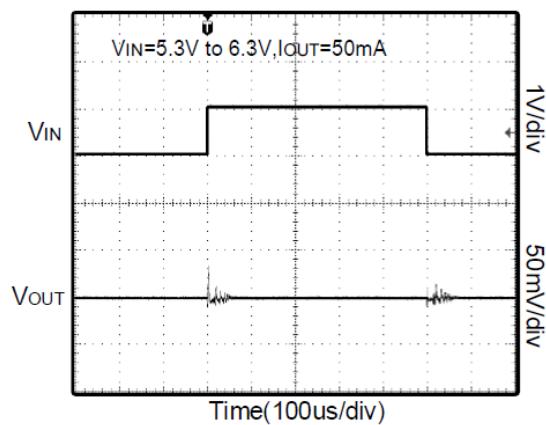

NOTE6: Output voltage temperature coefficient is defined as the worst-case voltage change divided by the total temperature range.

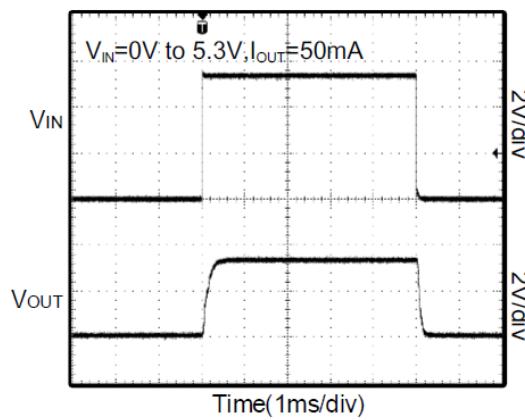

## TYPICAL PERFORMANCE CHARACTERISTICS

## DETAILED INFORMATION

### Overview

The A6345A low-dropout regulators (LDO) consumes only 3 $\mu$ A of quiescent current at light load and delivers excellent line and load transient performance. These characteristics, combined with low noise and good PSRR with low dropout voltage, make this device ideal for portable consumer applications.

### Thermal Considerations

When the junction temperature is too high, the thermal protection circuitry sends a signal to the control logic that will shut down the IC. The IC will restart when the temperature has sufficiently cooled down. The maximum power dissipation is dependent on the thermal resistance of the case and the circuit board, the temperature difference between the die junction and the ambient air, and the rate of air flow. The GND pin must be connected to the ground plane for proper dissipation.

### Applications Note:

1. The phase compensation circuit and ESR of the output capacitor are used inside the circuit to compensate, so a capacitor larger than 1.0uF must be connected to the ground.
2. It is recommended to use 1uF polar capacitors for input and output, and to keep the capacitors as close to the V<sub>IN</sub> and V<sub>OUT</sub> pins of LDO as possible.
3. Pay attention to the use conditions of input and output voltages and load currents to avoid the power consumption (P<sub>D</sub>) inside the IC exceeding the maximum power consumption allowed by the package.

$$P_D = (V_{IN} - V_{OUT}) \times I_{OUT}$$

$$T_{PN} = P_D \times R_{\theta JA} + T$$

T<sub>PN</sub> is junction temperature

T is ambient temperature.

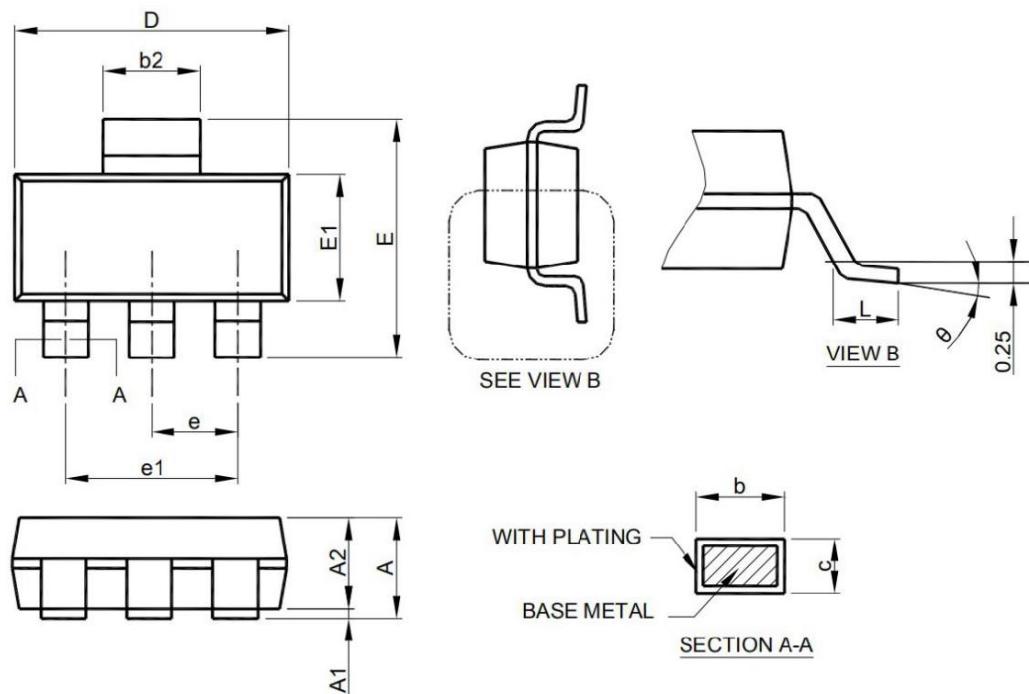

4. When the input voltage V<sub>IN</sub> is greater than 2.5V, if V<sub>IN</sub> is also higher than the output set value plus the device dropout voltage, V<sub>OUT</sub> is equal to the set value. Otherwise, V<sub>OUT</sub> is equal to V<sub>IN</sub> minus the dropout voltage. If V<sub>IN</sub> lower than 2.5V, the V<sub>OUT</sub> is:

$$V_{OUT} = V_{IN} - V_{Dropout}$$
