

DESCRIPTION

A1117A is a series of low dropout three-terminal regulators with a typical dropout of 1.3V at 1A load current.

Besides fixed voltage version ($V_{OUT} = 1.2V, 1.8V, 2.5V, 3.3V, 5V$), A1117A has an adjustable version that can provide an output voltage from 1.25 to 12V with two external resistors.

A1117A offers thermal shut down functions to assure stability of chip and power system. Trimming technique is used to guarantee output voltage accuracy within $\pm 2\%$.

The A1117A is available in SOT-223, TO-252 and SOT89-3 packages.

FEATURES

- Maximum output current is 1A
- Range of operation input voltage: Max 15V
- Line regulation: 0.1%/V (typ.)
- Load regulation: 10mV (typ.)
- Environment Temperature: $-20^{\circ}C \sim 85^{\circ}C$
- Available in SOT-223, TO-252 and SOT89-3 packages

APPLICATION

- DVB
- Computer Mother Board, Graphic Card
- LCD Monitor and LCD TV
- DVD Decode Board
- ADSL Modem
- Post Regulators for Switching Supplies

ORDERING INFORMATION

Package Type	Part Number	
SOT-223 SPQ: 2,500pcs/Reel	N	A1117ANR-XX
		A1117ANVR-XX
TO-252 SPQ: 2,500pcs/Reel	D	A1117ADR-XX
		A1117ADVR-XX
SOT89-3 SPQ: 1,000pcs/Reel	K3	A1117AK3R-XX
		A1117AK3VR-XX
Note	XX: Output Voltage, 12=1.2V, 18=1.8V, ADJ: Adjustable V: Halogen free Package R: Tape & Reel	
AiT provides all RoHS products		

TYPICAL APPLICATION

Application circuit of A1117A fixed version

PIN DESCRIPTION

ABSOLUTE MAXIMUM RATINGS

Max Input Voltage		15V
T _J , Max Operating Junction Temperature		150°C
T _A , Ambient Temperature		-40°C ~ 85°C
Package Thermal Resistance	SOT-223	20°C/W
	TO-252	10°C/W
T _S , Storage Temperature		-40°C ~ 150°C
Lead Temperature & Time		260°C, 10s

Stress beyond above listed “Absolute Maximum Ratings” may lead permanent damage to the device. These are stress ratings only and operations of the device at these or any other conditions beyond those indicated in the operational sections of the specifications are not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

RECOMMENDED WORKING CONDITIONS

Parameter	Symbol	Value	Units
Input Voltage Range		Max. 12	V
Operating Junction Temperature	T _J	-20 ~ 125	°C

ELECTRICAL CHARACTERISTICS

T_J = 25°C

Parameter	Symbol	Conditions		Min.	Typ.	Max.	Unit
Reference Voltage	V _{REF}	10mA ≤ I _{OUT} ≤ 1A, V _{IN} = 3.25V	ADJ	1.225	1.25	1.275	V

4. Thermal performance with OTP

A1117A-ADJ V_{OUT} Vs. Temp

BLOCK DIAGRAM

DETAILED DESCRIPTION

A1117A is a series of low dropout voltage, three terminal regulators. Its application circuit is very simple: the fixed version only needs two capacitors and the adjustable version only needs two resistors and two capacitors to work. It is composed of some modules including start-up circuit, bias circuit, bandgap, thermal shutdown, current limit, power transistors and its driver circuit and so on.

The thermal shut down modules can assure chip and its application system working safety when the junction temperature is larger than 140°C.

The bandgap module provides stable reference voltage, whose temperature coefficient is compensated by careful design considerations. The temperature coefficient is under 100 ppm/°C. And the accuracy of output voltage is guaranteed by trimming technique.

TYPICAL APPLICATION

A1117A has an adjustable version and fixed versions (1.2V, 1.8V, 2.5V, 3.3V and 5V)

Fixed Output Voltage Version

Application circuit of A1117A fixed version

1. Recommend using 10uF tan capacitor as bypass capacitor (C1) for all application circuit.
2. Recommend using 10uF tan capacitor to assure circuit stability.

Adjustable Output Voltage Version

A1117A-ADJ provides a 1.25V reference voltage. Any output voltage between 1.25V~12V can be achievable by choosing two external resistors (schematic is shown below), R1 and R2

Application Circuit of A1117A-ADJ

The output voltage of adjustable version follows the equation: $V_{OUT} = 1.25 \times (1 + R2/R1) + I_{ADJ} \times R2$. We can ignore I_{ADJ} because I_{ADJ} (about 50uA) is much less than the current of R1 (about 2~10mA).

1. To meet the minimum load current (>10mA) requirement, R1 is recommended to be 125Ω or lower. As A1117A-ADJ can keep itself stable at load current about 2mA, R1 is not allowed to be higher than 625Ω.
2. Using a bypass capacitor (C_{ADJ}) between the ADJ pin and ground can improve ripple rejection. This bypass capacitor prevents ripple from being amplified as the output voltage is increased. The impedance of C_{ADJ} should be less than R1 to prevent ripple from being amplified. As R1 is normally in the range of 100Ω~500Ω, the value of C_{ADJ} should satisfy this equation: $1/(2\pi \times f_{ripple} \times C_{ADJ}) < R1$.

THERMAL CONSIDERATIONS

We have to take heat dissipation into great consideration when output current or differential voltage of input and output voltage is large. Because in such cases, the power dissipation consumed by A1117A is very large. A1117A series uses SOT-223 package type and its thermal resistance is about 20°C/W. And the copper area of application board can affect the total thermal resistance. If copper area is 5cm*5cm (two sides), the resistance is about 30°C/W. So the total thermal resistance is about 20°C/W + 30°C/W. We can decrease total thermal resistance by increasing copper area in application board. When there is no good heat dissipation copper are in PCB, the total thermal resistance will be as high as 120°C/W, then the power dissipation of A1117A could allow on itself is less than 1W. And furthermore, A1117A will work at junction temperature higher than 125°C under such condition and no lifetime is guaranteed.
